

ONION

A design-led seating range combining style, durability and safety

Designed in collaboration with award-winning British studio **David Fox Design**, Onion is part of a new tub seating range created for both hospitality and healthcare environments. Developed with a dual-purpose approach, it has been carefully refined to perform in even the most challenging settings, offering one cohesive solution across sectors.

Its smooth, fully rounded form eliminates sharp edges, helping reduce risk while maintaining a soft, welcoming aesthetic. The contemporary design integrates seamlessly into a wide variety of interiors, from high-demand healthcare environments to more relaxed, hospitality-inspired spaces.

Engineered for strength and reliability, Onion features a robust construction designed for demanding use. Its weighted, sculpted form helps deter lifting, movement, and misuse, supporting safer, more controlled environments

without compromising on appearance or comfort.

A fully enclosed base removes gaps and access points, improving hygiene and simplifying maintenance. For additional security and stability, the unit is fixed in place using stainless steel security fasteners.

The Onion range is a versatile, design-led seating solution that balances safety, durability, and comfort across every environment.

ONION

“We are very pleased to announce the launch of the Onion range, a chair design that brings complex, organic forms to life through expertly crafted, traditional frame-making techniques.”
